

FLEXTANK®

Transport Wine, Cider or Mead with Controlled Oxygen Permeation for Less

Saving you money while producing, maturing and even transporting world-class wines and beverages is one of our top goals at Flextank.

But what does your investment in a [Flextank Stacker](#) look like in

comparison to a common food-grade Intermediate Bulk Container(IBC)?

While the initial cost of an IBC could make it appear like an appealing option to move your product, you may not be getting long-term savings you were banking on, and you incur the risk of degrading the quality or losing your entire container due to uncontrolled oxygen permeability...

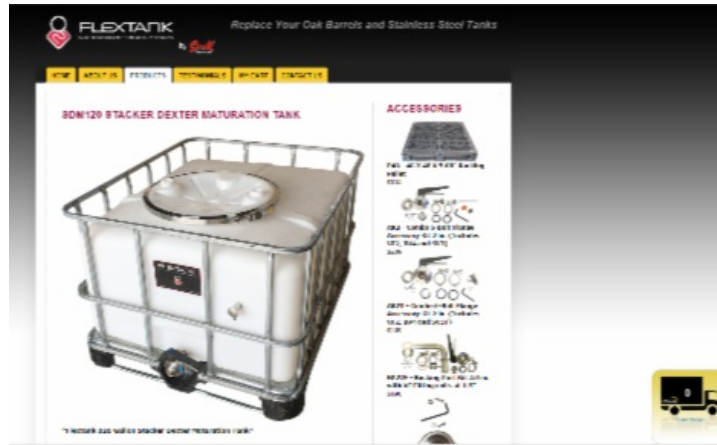

**Transporting in a Flextank Stacker 300
VS Standard 330 IBC**

		
	Flextank 300	330 IBC
Includes Cage for Easy Manuevering & Stacking	✓	✓
Stack Up to 3 High	✓	✓
Controlled Oxygen Permeability	✓	
Sterilizable Stainless Steel Fittings	✓	
Cleaning Opening Diameter	19"	6"
Life of Tank	15-20+ Years	1 Year/1 Use
Investment per Unit	\$1190-\$1325	\$210-\$530
Cost per Unit/Year	\$59.50-\$88.34	\$210-\$530

When compared side by side, you can see the true cost of an IBC can be a little more than you bargained for. Flextank Stackers with controlled micro oxygenation will protect your wine, cider, mead, or spirits investment at any point in the supply chain for a lower annual cost per tank.
