Why Flextank?

Flextanks are engineered to be the industry's #1 choice for barrel & stainless steel tote replacement. Flextank is proudly made in the USA and sold throughout the world. We are the leaders in new age polymer vessels. Numerous award winning wines, ciders and meads are fermented, aged and bottled out of our Flextanks. With passive oxygen rates similar to barrels you can now manage your winery with overall sustainability, better efficacy and exacting control.

Enhanced Durability

Flextanks are produced using extremely durable and neutral polyethylene. Flextanks are built to last over 20 years, several times the effective life of a barrel.

Space Savings

Flextanks are configured for high-efficiency use of space in professional wine, cider, mead and related beverage-making industries. The variety of tank options makes it possible to double the production capacity of your barrel room.

Oxygen & Flavor Control

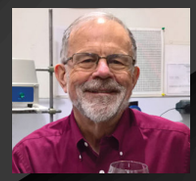
Flextanks have been specifically engineered to assist in oxygen management. Options include both heavyweight and lightweight maturation vessels. These vessels simulate the micro oxygenation process of barrel aging. The hygienic and easily sanitized environment in all the Flextank helps producers preserve the character of their products as well as precisely control flavor additions using Flextank's high quality and flavor specific barrel alternatives.

Cost & Labor Savings

Flextanks do not require regular topping. Maintenance, transport and sanitation are easier and far less time consuming than barrels, thus lowering labor costs.

Environmental Impact

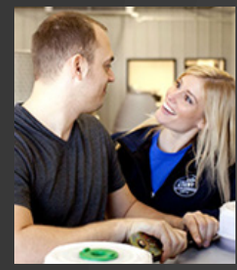
Flextank aims to keep its environmental impact as minimal as possible. In line with that aim, all of our polyethylene vessels and metal accessories are fully recyclable. Flextanks also require much less water for effective cleaning than similar capacity vessels made from wood or stainless steel.



Using Flextanks contributes to your bottom line in three important ways; helping you make better wines, lower production costs, and with greater assurance that the wines remain under your control.

Richard Carey, Ph.D
Winemaker, Tamanend Winery

I've used Flextank vessels for 5 vintages with great success and many best in class wines. The versatility and ease of use of the Apollo tank allows me to focus on small lots with attention to detail and allow for gentle skin contact for a clean and proper extraction.



Eric Harris
International Wine Channel TV's 'Rising Star Winemaker Award' Winner and Owner & Winemaker, Two EE's Winery

I consult for over a hundred small wineries and frequently recommend Flextanks. They breathe like a barrel, and unlike a stainless steel vessel, they allow off-gassing as well as oxygen uptake. In concert with well-selected oak alternatives, Flextanks can yield aging results comparable or superior to a good French Oak barrel at a fraction of the cost. We prefer their design to other containers because they are designed to be topped and don't have any air pockets.

Clark Smith
Owner, WineSmith Wines & Consulting and Author, Post Modern Winemaking

We bought our first Flextanks in 2008, and while we planned to buy more barrels and stainless tanks, the Flextanks were so convenient and fit our needs so well that we continued to buy them over the years. They allowed us to expand our operation and stay within our limited budget. Flextanks work well for small batch fermentation and for cider storage, and we appreciate the micro-oxygenation that happens with the heavy wall polyethylene as well as the fact that they can be cleaned with just hot water and sanitizers.

Bear & Nancy Bishop
Owners & Cidermakers, Alpenfire Cider

FLEXTANK

Superior Solutions for Professional Winemaking

Save time, labor, floor space, and money vs oak barrels & stainless steel tanks!

Stackers

Flextank Stackers come in your choice of regular or heavyweight with a stacking cage that allows convenient stacking and movement with a fork truck.

120gal Stacker (455 liters)
40"x48" footprint, 30" tall, equivalent to 2 barrels, stack full 4-high

240gal Stacker (910 liters)
40"x48" footprint, 45" tall, equivalent to 4 barrels, stack full 3-high

300gal. Stacker (1,135 liters)
40"x48" footprint, 53" tall, equivalent to 5 barrels, stack full 3-high

Egg Tanks

Flextank Egg Tanks offer superior fermentation results while promoting internal convection mixing and cap concentration.

230gal Apollo (870 liters)
48" diameter, 51" tall, equivalent to 4 barrels, includes 2 bolt-on pivots

528gal Orion (2,000 liters)
56" diameter, 82" tall + 8" base (included), equivalent to 8 barrels, also includes VF4 Flange Kit, SV1T Sample Valve, & FL1 Fermentation Lock

NEW 528gal Orion MAX & MAX PLUS (2,000 liters)
Include Lower Manway, 2" or 4" Bottom Drain, & Galvanized Base Frame

Dexters

Flextank Dexters come in your choice of regular or heavyweight with a 19" clamp lid for easy use of adjuncts and cleaning.

50gal Dexter (190 liters) 20" Diameter, 46" Tall

80gal Dexter (300 liters) 24" Diameter, 46" Tall

120gal Dexter (455 liters) 24" Diameter, 67" Tall

200gal Dexter (755 liters) 34" Diameter, 64" Tall

300gal Dexter (1,135 liters) 34" Diameter, 90" Tall

500gal Dexter (1,900 liters) 42" Diameter, 96" Tall

Accessories

From oak staves, pallets, thermometers, skins, manways, bulkhead fitting kits, racking elbows, fermentation locks, chill systems, valves and lifting straps to picking bins- we carry all the essential add-ons to make outstanding and award-winning beverages. in your Flextank.
